                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 1, Application US/08916421B
Patent No. 6503729
GARDEAL INFORMATION:
APPLICANT: Bult et al.
ITILE OF INVENTION:
COURTEN NO. 6503729
TITLE OF INVENTION:
Januaschii
FILE REFERENCE: PB275
TITLE OF INVENTION:
Januaschii
FILE REFERENCE: PB275
TITLE OF INVENTION UNMBER: US/08/916,421B
CURRENT APPLICATION NUMBER: US 60/024,428
PRIOR APPLICATION NUMBER: US 60/024,428
PRIOR FILING DATE: 1996-08-22
NUMBER OF SEG ID NOS: 3
SOFTWARE: Patentin version 3.1

SEQ ID NO GST8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 6792, Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS
TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: UNDERS: US 60/074,788
FILE REFERENCE: 1999-02-18
PRIOR PILING DATE: 1999-02-18
PRIOR PILING DATE: 1999-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 6792
LENGTH: 802
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SGS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Genes were identified by a combination of several methods: Gene prediction programs including Genscan+ (Chris Burge, http://CCR-081.mit.edu/GENSCAN.html), GenemarkHMM (Mark Borodovsky, http://genemark.biology.gatech.edu/GeneMark/), GlimmerA (a variant http://www.igr.org/softlab/glimmerm.htm/glimmerm.html, and GeneSplicer (Mihaela Pertea, and Steven Salzberg, contact mpertea@tigr.org), searches of the complete sequence against a peptide database and the plant EST database at TIGR (http://www.tigr.org/tdb/tgi.shtml). Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity are named as unknown proteins. Genes without significant peptide similarity but with EST similarity, that are predicted by more than two gene prediction programs over most of their length are annotated as hypothetical proteins. Genes encoding tRNAs are predicted by ERNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE/). Simple repeats are identified by repeatmasker (Arian Smit, http://tp.genome.washington.edu/RM/Repeatmasker.html).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             join(57. .242.335. .747)

NOTE: This sequence may represent more than one clone.
NOTE: This is a "working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Muzny, D. Submitted (19-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 19, 2002 this sequence version replaced gi:23911491.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads; assembled using Atlas (http://www.hgsc.bm.tmc.edu/projects/rat/). Each contig described in the feature table below represents; a scaffold in the Atlas ssembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and ordered and separated by sized gaps filled with Ns to the settimated, and separated by sized beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table. Bryant, N., Buhay, C., Burch, P., Burrell, K., Calderon, E., Cardenas, V., Charez, D., Charde, C., Chan, R., Chen, Y., Chacko, J., Chacke, J., Chacko, J., Chacke, J., Chacko, J., Chacke, J., Drah, M., Chen, J., Deaderich, D., Deaderich, D., Deaderich, D., Deaderich, D., Deaderich, D., Deaderich, D., Deaderich, D., Deaderich, D., Deaderich, J., Charles, M., Flagg, N., Parle, R., Forler, M., Forler, M., Forler, M., Forler, M., Gerker, M., Karath, C., Liu, J., Liu, M., Marker, G., Karath, M., Martin, R., Martin, R., Martin, R., Martin, R., Martin, R., Martin, R., Martin, R., Martin, R., Martin, R., Martin, R., Martin, R., Martin, R., Submitted (26-APR-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA (bases 1 to 282156)

                                                                                                                                                                                                                                                                      NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html) NOTE: This sequence may represent more than one clone. NOTE: This is a 'working draft' sequence. It currently consists of 5 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        PAT 11-MAY-2001

invention relates to identifying a stress condition to which a plant li has been exposed, comprising: contacting nucleic acid representative of expressed polynucleotides the plant cell with an array or probes representative of the plant Identifying a stress condition to which a plant cell has been exposed and producing plants with increased tolerance to these abiotic stresses Claim 144; SEQ ID NO 3729; 577pp + Sequence Listing; English

Cell genome; and the state of expressed polymuclectides in the plant cell genome; and a profile of expressed polymuclectides in the plant cell production of transgence plants, cells and seeds and in producing plants production of transgence plants, cells and seeds and in producing plants with increased tolerance to abject stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention.

Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to berwent by the European Patent Office.

SSEI encodes a protein (see AAB1918) that, when expressed in a cell of a plant, modifies or alters the production of a food storage reserve material (e.g. protein, lipid or carbohydrate storage reserve, facilitates the intracellular transport of a storage protein, or facilitates the formation of protein or oil bodies. The invention provides a transgent plant (or plant cell, plant tissue, plant organ or plant component) which includes a recombinant SSEI transgene that modifies the production of food storage reserves, thereby

directly or indirectly the insulin receptor or Insulin receptor signalling pathway in the manufacture of aimedicament for preventing or treating cephalic pain. Also described is an isolated polymucleotide (II) or protein (III) comprising a polymorphism that causes susceptibility to or protein (III) comprising a polymorphism that is in linkage disequilibrium with the first polymorphism. (I) has antimigraine and vulnerary activities. (I) is useful for treating cephalic pain which may be a cluster headache. (Anonic paroxyman hemicramia, headache associated with vascular disorders, headache associated with substances or their withdrawal (for example drug withdrawal) tension headache and

Polymorphisms ciphalic pain, particularly to migraine. The method comprises typing a region of the insulin receptor gene or insulin receptor specification. The method comprises typing a region of the insulin receptor gene or insulin receptor protein of an individual. A susceptibility to cephalic pain may be diagnosed using a probe, primer or antibody which is capable of detecting a polymorphism in an insulin receptor gene region or the insulin receptor protein. The present sequence corresponds to a polymorphism site, and flanking sequences of a single nucleotide polymorphism
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Diagnosis of susceptibility to migraine in individuals comprises the identification of polymorphisms in the insulin receptor gene region

The present sequence is provided in a specification relating to a method for diagnosing susceptibility to cephalic pain in an individual. The method comprises typing in vivo or in a sample from the receptor of individual, the insulin receptor gene region or insulin receptor comparing the protein and thus determining whether the individual is susceptible to caphalic pain. Polymorphisms in the insulin receptor gene that cause susceptibility to cephalic pain have been found. Susceptibility may be diagnosed using a probe, primer or antibody which is capable of detecting an insulin receptor gene region or insulin receptor protein polymorphism. The method is useful for diagnosing susceptibility to migraine, cluster headache, chronic paroxysmal hemicrania, headache associated with substances or their withdrawal, tendion headache, and so on. It is useful for assessing the efficacy of agents in relieving cephalic pain, and can be used to assess the predisposition and/or susceptibility of an individual to the
                                                                                                                                                                                                                                                                                                                                                                                                                                  Diagnosing susceptibility to cephalic pain such as migraine by typing insulin receptor gene or protein in vivo, or in a biological sample and determining individual's susceptibility to cephalic pain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         development of diseases mediated by the insulin receptor and in the development of new drug therapies which selectively target one or more allellor variants of the insulin receptor gene. The present sequence corresponds to a polymorphic site and flamking sequences of a single nucleotide polymorphism (SNP) in the human insulin receptor gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

The present invention relates to the use of an agent that modulates directly or indirectly the insulin receptor or insulin receptor or relating pathway in the manufacture of a medicament for preventing or treating cephalic pain. Cephalic pain disorders are generally multifunctional disorder, with a cluster of headache, chronic headache associated with acluster of headache. Chronic headache associated with substances or their withdrawal (for example drug withdrawal), tension headache and in particular migraine with aura or migraine with aura or migraine with aura or migraine with aux or migraine of components of the glucose and lipid metabolism pathways, in particular by manipulation of the insulin receptor. Insulin receptor is an important component in the regulation of the glucose and lipid metabolism pathways. Single nucleotide polymorphisms (SNP) in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Use of agent that modulates directly or indirectly insulin receptor insulin receptor signaling pathway in manufacture of medicament for preventing or treating cephalic pain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               lin receptor gene contribute to susceptibility to cephalic pain, present sequence is INSBa polymorphism of human insulin receptor

                                                                                                                                                                                                                                                                                                                                                                                                         susceptibility to diabetes in an individual. The method of the invention has antidiabetic activity. The method is useful for diagnosing diabetes or susceptibility to diabetes in an individual. Other methods of the invention are is useful for treating diabetes and for treating and preventing diabetes. The present sequence contains a single nucleotide
                                                                                                                                                                                                                                                                                                    Diagnosing diabetes or susceptibility to diabetes in individual by typing insulin receptor gene region or insulin receptor protein in sample obtained from individual
                                                                                                                                                                                                                                                                                                                                                                                              he invention relates to a novel method for diagnosing diabetes or

The present invention describes the use of an agent (I) that modulates directly or indirectly the insulin receptor or insulin receptor to signalling pathway in the manufacture of a medicament for preventing treating cephalic pain. Also described is an isolated polymoclecide (II) or protein (III) comprising a polymorphism that causes susceptibility to cephalic pain, ar aneurally occurring polymorphism that is in linkage disequilibrium with the first polymorphism. (I) has antimigraine and vulnerary activities. (I) has useful for treating cephalic pain which may be a cluster headache, chronic paroxysmal hemicrania, headache associated with vaccular disorders, headache associated with substances or their withdrawal (for example drug withdrawal), tension headache and in particular migraine with or without aura. The present sequence represents exons 14-17 from the insulin receptor gene including introns, which is used in the exemplification of the present invention. Use of agent that modulates directly or indirectly insulin receptor or insulin receptor signaling pathway in the manufacture of medicament for preventing or treating cephalic pain Disclosure; Page 54-57; 58pp; English.

Diagnosis of susceptibility to migraine in individuals comprises the identification of polymorphisms in the insulin receptor gene region

Disclosure; Page 38-41; 41pp; English

The present sequence is provided in a specification relating to a method of diagnosing susceptibility to cephalic pain. Polymorphisms

ů cephalic pain, particularly to migraine. The method comprises typing a region of the insulin receptor gene or insulin receptor protein of an individual. A susceptibility to cephalic pain may be diagnosed using a probe, primer or antibody which is capable of detecting a polymorphism in an insulin receptor gene region or the insulin receptor protein. in the insulin receptor gene have been found to cause susceptibility 88888888888

Diagnosing susceptibility to cephalic pain such as migraine by typing insulin receptor gene or protein in vivo, or in a biological sample and determining individual's susceptibility to cephalic pain

Disclosure; Page 43-46; 46pp; English.

The present sequence is provided in a specification relating to a method for diagnosing susceptibility to cephalic pain in an individual. The method comprises typing in vivo or in a sample from the reserved comprises typing in vivo or in a sample from the individual, the insulin receptor gene region or insulin receptor or protein and thus determining whether the individual is susceptible to cephalic pain. Polymorphisms in the insulin receptor gene that cause susceptibility to cause susceptibility to cephalic pain have been found. Susceptibility and deterting a probe, primer or antibody which is capable of detecting an insulin receptor gene region or insulin receptor protein polymorphism. The method is useful for diagnosing susceptibility to migraine, cluster headache, chronic paroxysmal hemicrania, headache associated with substances or their withdrawal, tension headache, and so on. It is useful for assessing the efficacy of agents in relieving cephalic pain, and can be used to assess the ability of agents to modulate insulin the predisposition and/or susceptibility of an individual to the insulin receptor and in the predisposition and/or susceptibility development of diseases mediated by the ö

development of new drug therapies which selectively target one or more allelic variants of the insulin receptor gene.

The present sequence is complete sequence from exon 14 to 17 of human insulin receptor gene. SNP in this sequence contributes to susceptibility
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to the use of an agent that modulates directly or indirectly the insulin receptor or insulin receptor signalling pathway in the manufacture of a medicament for preventing or treating cephalic pain. Gebhalic pain disorders are generally multifunctional disorder, with a cluster of headache, chronic paroxysmal hemicrania, headache associated with vascular disorders, headache associated with substances or their withdrawal (for example drug withdrawal), tension headache and in particular migraine with aura or migraine without aura. The treatment of cephalic pain and migraine involves manipulation of components of the glucose and lipid metabolism pathways, in particular by manipulation of the insulin receptor. Insulin receptor is an important component in the regulation of the glucose and lipid metabolism pathways. Single nucleotide polymorphisms (SNP) in the

ABZ73281-ABZ73697 represent cDNAs corresponding to 391 human secreted protein genes, and ABP00947-ABP01363 represent the proteins they encode. ABZ73698-ABZ73698 represent human secreted protein genomic fragments. The invention also encompasses antibodies specific for the secreted proteins in drug screening and recombinant the use of the secreted proteins in drug screening and recombinant. Covectors and host cells comprising a nucleic acid of the invention. The secreted proteins are thought to be involved in biological activities associated with cellular signalling, cellular differentiation, cell migration, prohormone activation and neurotransmitter activity. The secreted proteins, nucleic acids encoding them, antibodies or antibody fragments specific for the secreted proteins, and modulators of protein crivity are useful for diagnosing or treating cancers or other hyperproliferative disorders. Additionally, the secreted proteins and their nucleic acids may also be used in the treatment of autoimmune disorders, inflammatory disorders, diseases involving angiogenesis, AIDS (acquired immunodeficiency syndrome), hepathtis, anaemia, and to promote wound healing. Nucleic acids of the invention may be used for chromsome acids and and acids the invention may be used for chromsome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 identification, chromosome mapping, in gene therapy, for identifying individuals from minute biological samples, as hybridisation probes, and as molecular weight markers. The present sequence represents a human secreted protein genomic fragment referred to in the disclosure of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention comprises the amino acid and coding sequences of human secreted proteins. The DNA and protein sequences of the invention are useful for the diagnosis and treatment of allergic disorders, asthmatic disorders and immediate hypersensitivity diseases (e.g. hay fever, allergic conjunctivitis and allergic rhinitis). The proteins of the invention are also useful for identifying a binding partner. The nucleic acids of the invention are also useful for chromosome identification, radiation hybrid mapping or long-range restriction mapping. The present DNA sequence represents a human secreted protein-related DNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; secreted protein; nootropic; neuroprotective; cytostatic; anti-HIV; virucide; dermatological; immunoeuppressive; anti-inflammatory; anti-HIV; vulnerary; antibacterial; antiparkinsonian; antisickling; antianaemic; antiarthritic; cancer; antiparkinsonian; hepatotropic; cerebroprotective; antifalmamatory; antialalergic; antidiabetic; antituter; antialergic; antianaemic; antidiabetic; antiparasitic; cardiant; immune disorder; infection; vaccine; cardiovascular disorder; neurological disease; nephrotropic;

New human secreted proteins encoded by genes contained in cDNA clones (e.g. HGCACI9), useful for preventing, treating or diagnosing e.g. ALIDS, multiple sclerosis, herpes virus, leukemia, tick-borne encephalitis or west Nile fever

Disclosure; Page 2326-2330; 2423pp; English.

The invention relates to novel human genes (ABZ66891-ABZ68209) and the encoded secreted proteins (ABP99470-ABP99872) useful for preventing, treatment ameliacrating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (antibagonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other and prevention of: a cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung or unogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid architis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.

/clone 11b="Arabidopsis thaliana T-DNA insertion lines" |
/clone | PCR was performed on DNA from Arabidopsis thaliana plants (TI) which were transformed with the T-DNA from vector pAC161. The lines contain one or more T-DNA insertions. The DNA fragment(s) resulting from the PCR were directly sequenced to determine the genomic sequence flanking the insertion Sequences displaying significant processed for submission. T-DNA derived sequence were processed for submission. T-DNA derived sequences were
                       Direct Submission

Submitted (17-UN-2002) Weisshaar B., Max-Planck-Institut fuer
Zuechtungsforschung, Carl-von-Linne-Weg 10, Koeln, 50829, Germany
This sequence is recovered from the left border of the T-DNa. It
indicates an insertion within the locus defined by clone f418. The
sequences are generated at the MPI for Plant Breeding Research in
the context of the GABI-Kat project. GABI-Kat is part of the German
Plant Genomics program designated 'GABI'. Information on line
availability can be found at:
http://www.mpir-koeln.mpg.de/GABI-Kat/.

/clone="SALK 032102"
/clone="SALK 032102"
/clone lib="Arabidopsis thaliana TDNA insertion lines"
/clone lib="Arabidopsis thaliana lines and totes" PCR was performed on Arabidopsis thaliana lines each of which contains one or more TDNA insertion elements. The resultant fragment for each line was directly sequenced to determine the genomic sequence at the site of insertion. Details of the protocols used can be found at http://signal.salk.edu/tdna_protocols.html"

An Arabidopsis full-langth cDNA library was.constructed essentially as reported previously (Seki et al., 1998).cDNA-cleaved with BamHI and XhoI was ligated to modified Lambda FLC-1 vector (Carninci et al., submitted for publication) digested with BamHI and SalI: This clone is in a modified pBluescript vector. Please visit our web eite (http://www.gsc.riken.go.jp/e/plant/index_e.html) for further details.

Succhtungsforschung, Carl-von-Linne-Weg 10, Koeln, 50829, Germany
This sequence is recovered from the left border of the T-DNA. It
indicates an insertion within the locus defined by clone F4H6. The
sequences are generated at the MPI for Plant Breeding Research in
the context of the GABI-Kat.project. GABI-Kat is part of the German
Plant Genomics program designated 'GABI'. Information on line
availability can be found at:
http://www.mpiz-koeln.mgq.ak/GABI-Kat/.

The sequence contained an oligo-dT track that was present in the
oligonucleotide that was used to prime the synthesis of first
strand coNA and therefore this may represent a bonafile poly A
tail. The sequence tag present in the cDNA between the NotI site
and the oligo-dT track served to verify it as a clone from the
non-normalized embryo at gestational day 14 library CDNA tibrary

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                        1 ggttaagcgttttacttatg......tttctctctagctatattta 1677

APPLICANT: LYND DOUGETE-Stamm et al
APPLICANT: LYND DOUGETE-Stamm et al
APPLICANT: LYND DOUGETE ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS
TITLE OF INVENTION: BPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                  Sequence 71, Application US/08478675

Patent No. 5773246

GENERAL INFORMATION:
APPLICANT: KEENE, JACK D.
APPLICANT: KING, PETER H.
APPLICANT: LEVINE, TODD
TITLE OF INVENTION: METHODS AND COMPOSITIONS USEFUL IN THE
TITLE OF INVENTION: RECOGNITION, BINDING AND EXPRESSION OF RIBONUCLEIC ACIDS
TITLE OF INVENTION: INVOLVED IN CELL GROWTH, NEOPLASIA AND IMMUNOREGULATION
NUMBER OF SEQUENCES: 101
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

GENERAL INFORMATION:

Patent No. US20020131160A1

GENERAL INFORMATION:

PAPELICANT: Warren, Wesley C.

APPLICANT: Byatt, John C.

APPLICANT: Byatt, John C.

APPLICANT: Mariangan, Nagappan

TITLE OF INVENTION: NUCLEIC ACID AND OTHER MOLECULES ASSOCIATED WITH LACTATION AND TITLE OF INVENTION: MUSCLE AND FAT DEPOSITION

FILE REFERENCE: 37-21 (10297) C.

FILE REFERENCE: 37-21 (10297) C.

CURRENT FILING DATE: 2001-10-26

PRIOR APPLICATION NUMBER: US 09/465,231

PRIOR APPLICATION NUMBER: US 60/113,678

PRIOR FILING DATE: 1998-12-15

PRIOR FILING DATE: 1998-12-17

NUMBER OF SEQ ID NOS: 5912
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        APPLICANI: Litew, C.C.
TITLE OF INVENTION: Compositions and Methods Relating to Osteoarthritis
